Program Description

The Computer Information Technology (CIT) program includes tracks in Applications, Information Security, Internet Technologies, Network Administration, Network Technologies, and Programming, with a core of courses common to all. The core includes a general education component essential to a collegiate education and a technical component giving students an introduction to information systems, computer applications, program development, system maintenance, networking, security, Internet technologies, database design, and collaborative system development. In addition to core courses, students take specialty courses for their selected track.

The Applications Track emphasizes several aspects of application software. It includes such productivity applications as: word processing, spreadsheets, database management, presentation, geographic information systems, website development/maintenance, and help desk tracking systems. Completion of this track will prepare students to work with computer-based systems in business and industry.

The Applications Track - Software Support Option provides an in-depth knowledge of application software, computer system configurations, and data driven websites.

Upon completion of this program, the graduate can:
1. Evaluate, select, customize, and maintain software and hardware
2. Demonstrate proficiency in the use of application software
3. Demonstrate a fundamental knowledge of business principles and practices
4. **Software Support:**
   a. Demonstrate proficiency in the use of advanced application tools
   b. Assist others in the use of computer systems and software, , including face-to-face professional communication and the development of training material
   c. Use database programming to alter and enhance new and existing databases
   d. Use writing and research skills to understand technical manuals and help files.
